- ✓ 561311 - Staff Augmentation, Employment

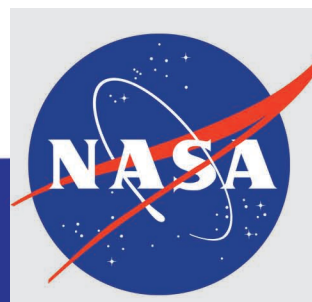

### Experience

- ✓ NASA Headquarters
- ✓ Defense Travel Management Office
- ✓ Commander Navy Installations
- ✓ GSA - Office of Inspector General

## Why Us? Proven Track Record of Excellence & Reliability

*Software Development is the bedrock of the corporate experience and history of the firm. In 2005, the company landed its first sub-contract with Lockheed Martin (formerly INS, Inc). The Principal engineer was one of the primary software engineers selected to develop the ERASMUS Financial Dashboard under the leadership of NASA Administrator, the Honorable Sean O'Keefe.*

The principal Engineer was responsible for the design, development and deployment of the Rental Vehicle Assistance Tool (RVAT). AkimTech was responsible for the full software development lifecycle of the Rental Vehicle Assistance Tool known as RVAT. The RVAT tool provided members of the Dept. of Defense employees the ability to report Accidents, Loss of Damage and Over chargess.

### The Defense Department sought a solution for their aging legacy financial systems

The Principal Engineer for Akimtech worked directly with SAIC and Accenture to develop an AS-IS and TO-BE architecture solution to address disparate legacy financial systems. The Engineers met with high level DOD Officials to discuss the TO-BE architectures that would consolidate their data and retire aging legacy systems.
